

## ...and in St. Louis

## A fact

Fatima's standing in St. Louis is one more evidence that to be fashionable a cigarette need not be expensive. For Fatima, moderate in price and "just enough Turkish" in blend, steadily outsells expensive, fancy-boxed, straight Turkish cigarettes at these and many other prominent places:

BUCKINGHAM HOTEL STATLER HOTEL

### COUNTY AGENT AND FARM BUREAU POPULAR AMONG FARMERS OF UNITED STATES.

A few months ago more than 2000 farmers were asked to answer the question: "What extension agency is most helpful to the farmer?" Thirty-eight per cent replied that they received the most help from the county agent and the farm bureau. Thirty-one per cent gave first place to the agricultural press.

If the vote was taken in Weber county there is no doubt but that a large percentage of farmers would give first place to the county agent and the farm bureau. It has only been a few years, five in fact, since the county agent and the farm bureau became factors in Weber county, and now it is difficult to see how we got along without them.

The survey made by the department of agriculture indicates the efficiency of the farm bureaus. In states where there are farm bureaus 66 per cent of the farmers placed the county agent and farm bureaus first among the factors which give them the most service.

In states without farm bureaus only 26 per cent of the farmers gave first choice to the county agent and 39 per cent placed the agricultural press first.

The farm bureau is a fine thing of itself and the county agent is a valuable man for the community, but when you get the two working as efficiently as they do in Weber county, there is a mighty combination functioning for the good of farmer, manufacturer and consumer.

### PROHIBITION AND CRIME.

Prohibition will have no effect whatsoever upon crime, according to Henry Barrett Chamberlin, director of the Chicago crime commission. The statement was made before the current events class of a university and the announcement is made that it caused surprise.

Mr. Chamberlin declared that the best of the criminals, that is those who are more shrewd and therefore the more dangerous to society, do not use intoxicants, but have been water drinkers. Mr. Chamberlin is supposed to be an expert on crime so his statement should be accepted upon its face value.

We do not need to take Mr. Chamberlin's word for it, however. We can study what has taken place in Utah since prohibition went into effect. One thing that has happened in Ogden is worth noting. The "Black Maria" has disappeared. There is little use for the "wagon" which was used principally to pick up drunks and carry them to jail.

There is no doubt that small offenses have been reduced by prohibition and we believe that there has been a reduction in such violent crimes as shootings, stabbings, and other crimes often associated with drunken orgies. But nobody must get the idea that there is no further use for police men.

There really is a greater demand for trained and intelligent police officers than ever before. In the first place it takes a clever peace officer to obtain evidence sufficient to convict many of the more shrewd dealers or makers of illicit liquor. Burglars are becoming more scientific and therefore harder to catch. The automobile bandits is a foe that is causing police many worries.

The profession of peace officer should carry with it more prestige now that the public is beginning to understand the policeman does more than merely pick a drunken wretch out of the gutter, load him into the patrol and dump him into the drunk house of a police station.

### FACTS ON INFLUENZA.

Dr. S. L. Burton, state medical director of the Modern Woodmen of America in New Mexico has written a paper on influenza which is declared to be one of the best concise treatises on the disease. He declares there is very little danger of the pneumonia complication if right methods are followed and he outlines the history, symptoms and treatment of influenza in the paper, the text of which follows:

History of the Disease.—The first record of influenza was registered 412 B. C., and history reveals several epidemics of the disease during each century since that time, and I have no doubt influenza will return at intervals in epidemic form until the end of time.

Symptoms.—Invasion sudden; marked prostration from the beginning; period of incubation 24 to 48 hours; temperature ranging from 100 in the mild to 105 in the severe cases, chills, cough, conjunctivitis, nose-bleed, insomnia, pain in head, bones and muscles.

Cause of Influenza.—The bacillus causing the disease has not been isolated, but many bacilli are associated with it, such as the streptococci, pneumococci and influenza bacilli. Contributing cause, a low temperature. Summer heat prevents influenza. The disease spreads over the country along the line of travel, first attacking the population of the cities, and later the inhabitants of the rural districts. It is my observation that the bacilli disappear before or by the time the patient recovers and is not active after the sickness has continued four or five days. This would establish the infectious period to the early part of the attack. Also, in order to contract influenza the victim must be in close proximity to the infected.

Immunity.—None of the cases I treated during the past epidemic suffered a return of the disease, and I believe that persons at the age of 40 and over, who for some reason were immune in the 1919 epidemic, had previously been the victims of influenza.

Diagnosis.—The diagnosis is easy during an epidemic but difficult in intervals between epidemics. During the later period many mistakes are made in diagnosis. The complications are bronchitis, sore throat, weakened heart muscles and pneumonia. The latter complication never develops unless the patient is exposed.

Much has been written in the medical journals concerning mild influenza during September, March and April. The thought is, why is the disease mild at this time of the year? It is because of the near approach to summer heat. If this is a fact, use summer heat in the treatment of the disease during the fall and winter. Such heat may be secured by the use of stoves, steam heat, hot air or hot water. Also it is not rational to treat a patient in the open who has a lowered resistance due to prostration, exhaustion and body fatigue by influenza, and still further lower the resistance of the patient to the unknown and various flora that accompany the disease and which multiply so rapidly under such conditions but are almost eliminated by summer heat.

Vaccination.—I had very little experience in vaccinating persons who had not been exposed to influenza. I only used it for members of the family who were exposed, and so far as I was able to detect I do not believe vaccination protected a single person from contracting the disease. I vaccinated all members of the family except small children, as soon as a diagnosis was made. I persisted in the use of vaccine because the patients usually showed an improvement within 24 hours after its use, and persons who were vaccinated run a milder course than those who refused.

Treatment.—The patient must avoid exposure to draughts from windows and doors. Keep the room at a uniform temperature and the sick well covered to prevent the least tendency to chilling the body. Permit bathing only when very necessary for cleansing purposes. Attendants instructed to use the bed pan for kidney and bowel movements and all changes of the gowns, sheets and bedding to be made with patient under cover and all doors and windows closed.

Influenza treated in well-ventilated rooms, at a uniform temperature of 70 degrees Fahrenheit, will not develop pneumonia. In a room kept at this temperature the influenza bacillus is clinically destroyed, or influenced by the temperature to the extent that it will not infect the nurse or persons who may be exposed to the germs of the patient.

## IDAHO FARM BUREAU MAY JOIN FEDERATION

February 9 and 10 Set as Dates for Deciding on Entering American Bureau

BOISE, Ida., Feb. 2.—Dates finally set for a meeting of the Idaho state farm bureau, to vote on a proposal to join the American Farm Bureau Federation are February 9 and 10. The executive committee of the county farm bureau will meet Monday afternoon, February 9, in Boise, and the farm bureau presidents will meet on Tuesday.

The call for the meeting is issued by L. W. Fluharty, director of the University of Idaho extension division, who is secretary of the state farm bureau.

"About 12 states have ratified the American constitution," says a letter to Mr. Fluharty from J. W. Coverdale, of Ames, Iowa, temporary secretary of the national organization, "and we have assurances of 12 or 14 more before the March 3rd meeting. I do not know of a single state that has held its annual meeting that has turned the American organization down."

On a basis of 100,000 membership Idaho will be entitled to two directors for participation in a national meeting to be held at Ames, March 3, in case the Idaho bureau votes to affiliate.

Farm bureau officers in the counties are being urged to make a careful survey of the sentiment of their territory with regard to joining the national organization.

I have treated my patients, from the beginning of the attack for pneumonia, by giving every four hours a capsule containing ammonia carbonate, quinine and strychnine, alternately with syrup of hydriodic acid. To eliminate, I administer calomel at the onset of the disease, followed with salts every two or three days. I use influenza vaccine in all except children, keeping in mind that I am treating a simple disease, which, in a large number of cases, has the pneumococcus bacillus, that will cause pneumonia if the patient is exposed to a cold atmosphere.

The patients are given a liquid diet until the temperature subsides; at that time the diet is gradually increased to normal. I make my patients go to bed and remain there for three days after the fever subsides. All are required to remain one week longer in a room at a uniform temperature of 70 degrees Fah., by which time the patient has made a complete recovery. It is necessary to furnish the nurse with a weather thermometer to carry out the above treatment successfully. I treated 400 cases of influenza on these lines, with no complication of pneumonia, no deaths, and having had but two calls at night and no consultations during the epidemic. I am convinced that pneumonia is prevented by this treatment, and that, clinically, the influenza bacillus is killed or so influenced by the heat, that persons coming in contact with the bacillus will not be infected. This later has been verified by the co-operation of the school superintendents and managers of public places where people meet, with the result that influenza disappeared in our community by the first of February. The theory is also substantiated by the fact that epidemics of influenza of the past have subsided in the United States when the temperature of our country reaches summer heat. It is safer to attend school and church, if the buildings are well ventilated and heated at an even temperature of 70 degrees Fah., than to walk the streets of a city.

Complications and Sequella.—The complications are bronchitis, sore throat, weakened heart muscles and pneumonia. The latter complication never develops unless the patient is exposed.

Report Issued Upon Visible Grain Supply

NEW YORK, Feb. 2.—The visible supply of American and bonded grain shows the following changes:

Wheat decrease, 228,000 bushels.  
Corn increased, 79,000 bushels.  
Oats decrease, 110,000 bushels.  
Rye increased, 410,000 bushels.  
Barley increased, 142,000 bushels.

Never mind telling what you think about people. If you thought you wouldn't think about them.

Eating peas on a knife is an art—but not if you cut yourself.

There's no use, we have found out, arguing with a baby with the colic—Argue with the colic, by all means.

No firmer fact has ever been established than that there is an end to everything.

### The Doctor Says:

## "You Never See Aged Fat People"

The physician is telling these two patients, each of whom feels "more or less upset most of the time," that if they reduce their weight they will become healthier, more contented—and longer lived.

Overweightness impairs the health in many ways. The accumulations of adipose tissue, packed around the vital organs, cause serious disorders. One of the most dangerous being the liability to sudden HEART FAILURE. If you are corpulent, you know the strain upon your heart, particularly when compelled to undergo some unexpected activity. Your life is no stronger than your heart. Don't risk untimely death. Ask any physician what this means!

### REDUCE WEIGHT HAPPILY!

Fat people are often victims of apoplexy, collapse from heat or sunstroke. The risk of accidents is greater than among persons of normal weight. When fat people become ill from almost any ailment their risk of death is greater. And you want to live!

A liposity dulls the mental as well as the physical processes. It impedes progress toward social, or professional, or business success. It is the foe to efficiency, symmetry and personal beauty.

Become slender! Do it by the best self-treatment in the world. Follow the pleasant and inexpensive

The Gentle Way To Reduce

### SEN. JOHNSON TALKS ON LEAGUE ARTICLES

Astounded at Statement in Viscount Grey's Letter on Equal Vote of U. S.

KANSAS CITY, Mo., Feb. 2.—Senator Hiram Johnson of California has characterized as "astounding" the statement in a letter of Viscount Grey, recently made public, that Great Britain does not object to the United States having an equal vote in the league of nations.

The senator was the luncheon guest of the City club. "If Great Britain has no objection," he said, "we seem to have some Americans who do."

Senator Johnson predicted the peace treaty would be Americanized "to a degree at least." Referring to a statement by President Wilson that a reservation to Article X would cut the heart out of the treaty, Senator Johnson said:

"We in the senate say that if that would cut the heart out of the treaty then we will cut the heart out of it."

### Poindexter Succeeds Newberry on Committee

WASHINGTON, Feb. 2.—Chairman Page of the senate naval committee has appointed Senator Poindexter, Republican, Washington, a member of the sub-committee investigating naval matters, in place of Senator Newberry, Michigan, who resigned from the sub-committee because of necessity for his attendance at court proceedings now in progress at Grand Rapids, Mich.

### University of Wisconsin Boosts Teachers' Pay

MADISON, Wis., Feb. 2.—An increase of salaries amounting to nearly twenty-five percent per annum and beginning with the second semester of the current year, has just been granted to the faculty of the University of Wisconsin by action of the board of regents. The announcement of the increase was made by President E. A. Birge, at the faculty meeting this morning.

We understand that Carranza is recommending the United States make Turkey safe for the Armenians.

A few more ends of the world and the ministers' salaries will all be paid up to date.

—03—

Why Feel Older Than You Are?

Old age is a condition, not merely a matter of years. Some folks are young at 80; others old at 60. So it isn't years alone that make one old. Weak kidneys and uric acid poisoning cause many of the discomforts of those past middle age. Lame, bent backs; stiff, achy joints; bad eyesight; deafness and urinary irregularities are too often the result of neglected kidney trouble. Thus the way is paved for rheumatism, gravel, dropsy, and Bright's disease. Why let weak kidneys make you older than you are? Why not feel younger? Use Doan's Kidney Pills. They have helped thousands of elderly folks. They should help you.

These Ogden People Speak:

Mrs. D. Spencer, 2522 Lincoln Ave., says: "Doan's Kidney Pills are a splendid remedy for old people. When my kidneys became disordered, they act like a charm. At these times, I have severe backache, too. I always keep Doan's in my home and use them when suffering from these attacks. Doan's always give me fine relief."

The above statement was given March 1, 1917 and on December 3, 1919. Mrs. Spencer said: "Since endorsing Doan's I haven't had the slightest need to use them. Doan's cured me to stay cured."

Wm. Hadley, 1033 24th St., says: "Whenever I had an attack of kidney complaint, I would suffer severely. I could hardly get up after sitting down because of the terrible pains through my kidneys. I was bothered by the irregular action of my kidneys and the secretions were scanty and burned in passage. I always used Doan's Kidney Pills for these attacks and they soon knocked the pains out of my back and regulated my kidneys."

## New Hair Growth After BALDNESS

HAIR GROWN ON MR. BRITTAIN'S BALD HEAD BY INDIANS' MYSTERIOUS HAIR GROWER

My head at the top and back was absolutely bald. The scalp was shiny. An expert said that as he thought the hair roots were extinct, and there was no hope of my ever having a new hair growth. Yet now, at an age over 60, I have a luxuriant growth of soft, strong, lustrous hair! No trace of baldness. The pictures show here are from my photographs.

### Indians' Secret of Hair Growth

At a time when I had become discouraged at trying various hair lotions, tonics, specialists' treatments, etc., I came across, in my travels, a Cherokee Indian "medicine man" who had an elixir that he asserted would grow my hair. Although I had but little faith, I gave it a trial. From recent photo. To my amazement a light fuzz soon appeared. It developed, day by day, into a healthy growth, and ere long my hair was as prolific as in my youthful days.

That I was astonished and happy is expressing my state of mind mildly. Obviously, the hair roots had not been dead, but were dormant in the scalp, awaiting the fertilizing potency of the mysterious poultice. I negotiated for and came into possession of the principle for preparing this mysterious elixir, now called Kotalko, and later had the recipe put into practical form by a chemist.

That my own hair growth was permanent has been amply proved. Many men and women, and children, have reported satisfactory results from Kotalko.

### How YOU May Grow YOUR Hair

My honest belief is that hair roots rarely die even when the hair falls out through dandruff, fever, excessive dryness or other disorders. I have been told by experts that often when hair falls out the roots become imbedded within the scalp, covered by hard skin, so that they remain for a time like bulbs or seeds in a bottle which will grow when fertilized. Shampoo (which contain alkalis) and hair lotions which contain alcohol are enemies to the hair, as they dry it, making it brittle. Kotalko contains these elements of nature which give new vitality to the scalp and hair.

PROVE FOR YOURSELF

Get a box of the genuine Kotalko at a reliable druggist's \$2.00 GUARANTEE with each box. A small testing box of Kotalko (with testimonials, etc.) may be obtained by sending ten cents, silver or stamps, to my address below.
